

User Scenario

Sam, a college student, has just arrived at his lecture with very little time to spare.

The lecturer immediately begins his lecture but Sam has just settled into his seat and needs to quickly organize himself so he can take notes without missing anything.

He realizes he hasn't organized his notes for today's lecture.

Instead of rooting through his bag looking for the correct copy, flicking through the copy looking for the first empty page to take notes, Sam opens his tablet and taps the "QuickNotes" app.

He can see at the top of the app, his recent notes from last night's lecture.

Unfortunately, today's lecture is a different module. The lecturer has already made it through the first slide of his lecture, so Sam doesn't have time to use the search option in the app to find his notes.

Luckily, he can use the scratch pad on the homepage of the app to quickly start writing.

Sam takes notes on the scratch pad all lecture, writing down key points, formulas, and ideas. The intuitive interface of the notes page allows him to keep up with the lecturer while also stylizing and formatting his notes neatly. He even uses the drawing tool to circle and underline important ideas.

When the lecture is finished, he's able to save the notes he's made to their correct notebook as well as add a tag to the note to remind him to come back to it later and add in the notes he's missed from the first slide.

On the bus ride home, Sam can easily review his notes from today using the 'Recent Notes' shelf on the homepage, which allows him to easily revise today's material as well as edit notes with additional material he finds in his study.

When Sam gets home after a busy day, he can access his notes from his computer thanks to the app's ability to synch notes across all devices. He organises all his notes, moving them between notebooks in the app, and adding important tags to notes he would like to come back to later. He even made use of the audio recording feature to make a record of his notes he could listen to on the bus tomorrow.

He reviews his notes on his phone in bed later that night to be ready for tomorrow's lessons.

Sam is grateful that the app allowed him to overcome the chaos of this morning's tight schedule while also allowing him to keep on top of his course work.
